

The use of laser in medicine and aesthetic medicine

Soft laser has been used in medicine in the physiotherapy and rehabilitation throughout the world for more than 30 years.

It has been demonstrated that the use of high frequency infrared laser acts as a bio-stimulation to the body. LadyLaser adopts this method in stimulating clitoris to reach intensified orgasm.

For more than 20 years, all over the world, Aesthetic Medicine uses soft laser for radical rejuvenation of the tissues by exploiting the ability of the laser to improve blood microcirculation, and increase the supply of oxygen and nutrients (tissue oxygenation, electrolytes, enzymes, and vitamin factors) to the cells.

Moreover it also increases the production of collagen type I, which is involved in rejuvenation of tissues and delay the natural process of aging.

The same results that aesthetic medicine professionals have obtained for many years using laser treatments in various parts of body, today, LadyLaser obtains results on the female sexual organ and even improves the physical appearance and sexual function.

EME - Health & Beauty Technology

LadyLaser was developed and manufactured by EME Srl.

EME Srl has developed and manufactured electronic equipment for Physiotherapy, Rehabilitation, Aesthetic and Aesthetic Medicine for over 25 years, its electronic devices are known and appreciated in over 80 countries worldwide.

The company is certified according to UNI EN ISO 9001: 2008 and UNI EN ISO 13485: 2004

PRIMA: innovation division of EME srl

LadyLaser is marketed by PRIMA, a division of innovative products of EME, which deals with the marketing of electronic equipment and innovative technologies all over the world.

Ladylaser

LADYLASER is an innovative device with relative patent.

Ladylaser is an infrared soft laser device which utilizes a low power laser diode controlled by microprocessor. The laser beam emission is controlled electronically. LadyLaser operates at high frequency and has a bio-stimulating effect. It has been designed to meet the important needs that women have in their sex life and intimate sphere. Ladylaser uses internal batteries that can be recharged with an external battery-charger linked to Ladylaser by a connector. The battery charge lasts for around 10 applications.

LadyLaser is equipped with a patented safety system LSE (Laser Safety Eyes) to ensure the protection of the user.

Once switched on, the laser beam is enabled only in the presence of reflective units (such as the skin) in the vicinity of the lens, at distances not greater than 2-3 cm. In the absence of reflective units, the device remains in stand-by mode.

LadyLaser is a device for personal use certified as class 3B laser according to Directive 60825.

MODELS AND CODES		
Model	Colour	Code
Ladylaser	White	LL - W
Classificazione laser		
3 B		
Generator Laser IR applicator	Power supply	Rechargeable batteries
	Battery capacity	1000 mAh
	Wavelength emitted laser diode	905 nm
	Length (fixed) of treatment	10 min - 15 min
	IR radiation detection sensor	Top front
	Diode peak power	75 W
Battery	Power supply	(90 ÷ 240) V (50 ÷ 60) Hz
	Average Recharge time	2 hours
External box dimensions	(width. x height. x depth.) 29,5x20x7 cm	
Size and weight of the device:	200 gr / Length 205 mm (without top) 37 mm diameter

LadyLaser

To improve the quality of life

Aphrodisiac food, pelvic gymnastics, lubricating vaginal creams, miracle pills, surgery. Over the years, numerous remedies have been produced for disorders that involve the sexual organs, both male and female. Events common to the majority of women and men, often involving not only physical discomforts but also psychological consequences, which could cause tensions in pair relations and in everyday life. Topics often difficult to treat, due to embarrassment or because there seems to be no solution to the problem.

Today there is a solution to improve the quality of a woman's sexual life: LadyLaser:

Women's needs regarding their sexual organs are often different:

- **The desire to reach more easily and faster orgasm**
- **The desire to experience more intense sensations during sex**
- **The desire to slow down the aging of the genital organ and keep a "young-looking" appear**

Meeting these needs is now possible with LadyLaser.

Thanks to studies, researches and experiments carried out for over 30 years in the field of physical therapy and aesthetic medicine including the use of laser in sexual activity are an advantage to all women.

The difficulty in reaching climax

Some women find it difficult to live sex as a joyful experience. Many of them are insecure about their bodies and are so focused on themselves, that they are not psychologically prepared to reach climax. Other women have never experienced one and wonder if they will ever reach one. LadyLaser makes it possible for women with such problems and consequently lead an unsatisfactory sexual life, to experience climax in a simple, fast and effective way.

For those women who do not encounter such problems, orgasms can be made more intense and longer lasting beyond all previous experience, increasing lubrication and bringing them to the heights of an emotional intensity never achieved before.

The stimulation achieved by using LadyLaser takes the place of or enhances the natural sexual excitement reached during prolonged foreplay before penetration.

LadyLaser stimulates the clitoris to achieve further stimulation, reaching orgasm in a sort time with much greater intensity.

LadyLaser can be used to revitalize the sexual activity of "longtime" couples and in general to make erotic games easier and more exciting for couples of any age.

The natural aging process of the female sexual organ

As time passes, the female genital organs, just as in all other parts body (face, breasts, etc..), undergo morphological and structural changes. Those changes are slow but are more perceivable during the pre-menopausal period.

However, even before this period, the external sexual organs lose tone due to decreased elasticity and tissue hydration as well as reduced production of collagen and elastin fibres.

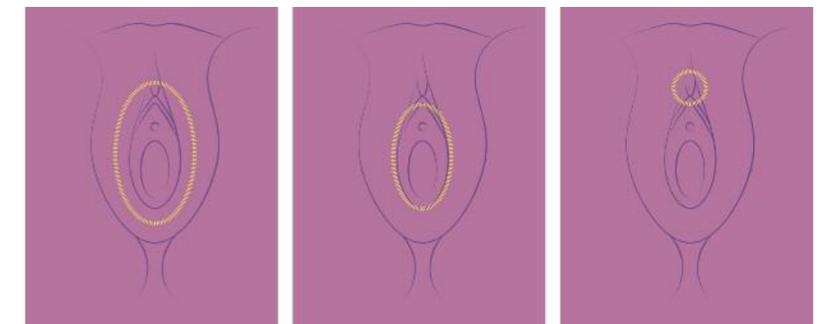

The pink colour becomes less intense due to the alteration of superficial vascularisation and vaginal surface becomes gradually looser as the walls layers of vagina become thinner.

LadyLaser acts on slowing down the aging process of the genital organ. If used regularly, LadyLaser allows a visible improvement of the appearance and tone of the vaginal mucous, solving the problems and inconveniences caused by the passage of time by means of the stimulating action of the laser.

Treatments

PROGRAM	TIME	AREA TO BE TREATED
Bio Stimulation	10 minutes	Clitoris
Aesthetic Treatment	15 minutes	Small and Big labias

The **Bio Stimulation** programme is recommended to reduce orgasm achievement time, and to experience longer and more intense orgasms. The **Aesthetic Treatment** program is recommended to slow down the natural aging process and for an effective action of genital rejuvenation.

BIG LABIAS

SMALL LABIAS

CLITORIS

How to Use

LadyLaser is quick and easy to use, there are no contraindications or side effects, even for prolonged use. Once the desired program has been set, place the lens perpendicularly over the desired area and gently move the laser for the duration of treatment. Each program is preset and timed and the device turns off automatically. We recommend treatments of 2-3 times a week for a period of at least 4-5 months to achieve noticeable and lasting results.
